

12.4

Current release  
6 March 2026

Five releases, and the one that changes your Monday

Everything below is already live on your account — there is nothing to install and no version to choose. **Live ETAs are the change worth reading about**; the rest are smaller, and 12.1 is mostly a speed fix you will notice without being told.

12.4

6 March 2026

Feature

Live ETAs on every consignment

Each consignment now carries an arrival window that updates as the vehicle moves, rather than the booked slot it was given on collection. The window narrows as the day goes on and is stamped with the time it was last recalculated, so a stale estimate is visible as a stale estimate.

On the list view as a column you can sort by

On the shared link your customer already has

In the API as `eta` and `etaUpdatedAt`

Not on consignments older than 90 days

12.3

20 February 2026

Feature

Proof of delivery, as a link

A signature and photograph can now be shared as a link that expires, instead of as an attachment that does not. Links are revocable, and revoking one takes effect immediately rather than at the next cache expiry.

12.2

6 February 2026

Feature

Bulk booking from a spreadsheet

Upload up to 500 consignments at once. The file is validated before anything is booked, and a failure report names the row and the field rather than the line number alone.

12.1

23 January 2026

Fixes

Faster search, and two corrections

Search across consignment references returns in under 400ms at any account size, down from about four seconds on the largest. A duplicate row on exported manifests and an incorrect weight unit on the Danish site are both corrected.

12.0

9 January 2026

Release

The tracking portal, rebuilt

The list, the map and the consignment page were rewritten around one record rather than three, which is what made everything above possible. **Nothing was removed and no URL changed** — a bookmark from the old portal still opens the page it always did.

Faster first paint on the list, 2.4s to 0.6s

Same permissions, roles and API keys

What is next, and roughly when

Standing bookings

A collection that repeats weekly without being re-entered. Late March.

Emissions per consignment

Reported against the tendered rate card. April, in beta first.

Two-factor for shared links

An optional code on any link that leaves your account. April.

Dates are intentions, not commitments — we would rather move one than ship it early. Anything that slips past the stated month is mentioned in the next note rather than quietly dropped.
